AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

- (Presently Amended) Integrated multispot satellite communication system [[(S)]]
 in a multimedia broadcasting network with <u>a</u> return channel, eharaeterised in that it comprises
 comprising common means of burst synchronisation [[(4)]] such that the transmission rate in a
 downlink direction [[(P2; U2; C2)]] from the satellite is a whole multiple of a clock reference of
 said network.
- (Presently Amended) System according to claim 1, eharacterised in that it includes said system comprising a satellite [[(S)]] suitable for generating configured to generate said network clock reference.
- (Presently Amended) Multiplexer-for-including in the <u>The system satellite</u> of claim 2, further comprising a multiplexer.
- 4. (Presently Amended) The system Multiplexer according to claim 3, characterised in that [[it]]said multiplexer is suitable for fitting in a synchronous manner different uplink channels into a downlink signal, in such a manner that wherein a period of the downlink frame [[(Tdf)]] is equal to a period of the uplink frame [[(Tdf)]].

Amendment Under 37 C.F.R. § 1.111 USSN 09/986,555

- 5. (Presently Amended) Method of burst synchronisation in an integrated multispot satellite communication system in a multimedia broadcasting network with return channel, characterised in that wherein said synchronisation is common for a multimedia services provider and a user, in such a manner that the transmission rate in a downlink direction (P2; U2; C2) is a whole multiple of a network clock reference.
- (Presently Amended) Method according to claim 5, eharacterised in that it
 emprises the generation of comprising generating said network clock reference in a satellite
 [[(S)]] of said system.
- (New) The method of claim 5, wherein a satellite uses a multiplexer to perform said synchronization.
- 8. (New) The method of claim 7, wherein said multiplexer synchronously fits different uplink channels into a downlink signal, and a period of the downlink frame is equal to a period of the uplink frame.
- (New) The system of claim 1, wherein said system is configured to communicate in accordance with digital video broadcasting-return channel system (DVB-RCS).
- (New) The method of claim 5, wherein method comprises communicating in accordance with digital video broadcasting-return channel system (DVB-RCS).

Amendment Under 37 C.F.R. § 1.111 USSN 09/986,555

- (New) The system of claim 1, wherein said downlink direction transmission rate is one of 54 Mbit/s, 81 Mbit/s and 108 Mbit/s.
- (New) The method of claim 5, wherein said downlink direction transmission rate is one of 54 Mbit/s. 81 Mbit/s and 108 Mbit/s.
- (New) The system of claim 1, wherein a bandwidth of a transmitter onboard said satellite is a multiple of 27 MHz.
- (New) The method of claim 5, wherein a transmitter onboard said satellite operates at a bandwidth that is a multiple of 27 MHz.
